OBJECTIVE

I'm highly motivated MCA student with hands-on experience building full-stack web applications using the MERN stack and AI integration. Seeking an entry-level software development opportunity to apply programming and problem-solving skills while continuing to learn.

EDUCATION

Master of Computer Applications (MCA) | Thakur Institute of Management Studies, Career Development & Research (TIMSCDR), Mumbai **2025–2027**
CGPA: 7.89/10 (pursuing) | University of Mumbai

Bachelor of Computer Applications (BCA) | Indira Gandhi National Open University **2024**
Percentage: 64%

Class XII (Science) | Happy Home English School **2020**
Percentage: 65% | CBSE

Class X | DALIMSS Sunbeam School **2018**
Percentage: 72.83% | CBSE

SKILLS

Programming Languages: Java, JavaScript
Web Technologies: React.js, Node.js, Express.js
Databases: MongoDB, MySQL
Libraries/Frameworks: Mongoose, React Router, Axios, Tailwind CSS, Recharts
Tools: VS Code, Microsoft Visual Studio, Git, GitHub, Maven, Jupyter Notebook, MS Office

PROJECTS

AI Habit Tracker — Full-Stack MERN & Gemini AI Application

GitHub | Live Demo

Tech Stack: *React.js, Vite, Tailwind CSS, Node.js, Express.js, MongoDB, Mongoose, JWT, bcryptjs, Google Gemini API, Axios, Recharts*

- Developed a full-stack habit-tracking application with a React interface and an Express REST API backed by MongoDB.
- Implemented user registration and login with JWT token generation, protected API middleware, and bcrypt password hashing.
- Built habit management operations for creating, editing, archiving, restoring, deleting, and reordering habits, with category, frequency, weekly target, icon, and color fields.
- Created daily completion logging with undo support, plus API calculations for current and longest streaks, completion rates , and activity summaries.
- Designed progress views including a 90-day completion heatmap, weekly and monthly charts, and category-based analytics using Recharts.
- Added a Gemini service layer and AI feature routes for weekly reports, habit suggestions, streak-recovery guidance, habit-analysis chat, and morning motivation; AI response paths require further validation

GameSense — VALORANT Analytics & AI Coaching Platform

GitHub | Live Demo

Tech Stack: *React.js, Vite, JavaScript, Node.js, Express.js, PostgreSQL, OpenAI API, Parse.bot API, HenrikDev API*

- Built a full-stack VALORANT analytics platform that allows users to search players using their Riot ID and explore player profiles, competitive ranks, seasonal statistics, and match history.
- Integrated Parse.bot and HenrikDev APIs through Express REST endpoints to retrieve player profiles, recent matches, and detailed match data.
- Developed performance analytics dashboards displaying win rate, K/D ratio, average kills and deaths, and recent performance trends.
- Implemented detailed match analysis featuring team scoreboards, player performance, round-by-round events, economy statistics, and opponent damage breakdowns.
- Integrated OpenAI GPT-4.1-mini to generate personalized, evidence-based AI coaching reports with performance insights, improvement areas, agent-specific tips, and a three-step practice plan.
- Designed a PostgreSQL schema for player and match records and configured backend database connectivity.

CERTIFICATIONS

- Foundation C# with Microsoft — freeCodeCamp
- Generative AI in Action — IBM (2026)
- MATLAB — Explore Data with MATLAB Plots

EXTRA-CURRICULAR ACTIVITIES

- Participated in Synapse with DealGenius AI — Smart Shopping & Price Advisor.
- Participated in GenAI with AgriSage — AI-powered farming assistant.

ADDITIONAL INFORMATION

Interests: Playing video games, music

Languages Known: English, Hindi
